                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Application US/09724864
Patent No. 6380362
GENERAL INFORMATION:
APPLICANT: Watson, James D
APPLICANT: Murison, James G
TITLE OF INVENTION: Polynucleotides, polypeptides expressed
TITLE OF INVENTION: Dy the polynucleotides and methods for thei;
FILE REFERENCE: 11000.1050U1
CURRENT FILING DATE: 2000-11-28
PRIOR APPLICATION NUMBER: U.S. No. 6380362 60/171,678
PRIOR FILING DATE: 1999-12-23
NUMBER OF SED ID NOS: 72
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1258

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09886404

GENERAL INFORMATION:

APPLICANT: Medlock, Eugene

APPLICANT: Silbiger, Scott M.

APPLICANT: Silbiger, Scott M.

APPLICANT: Bliot, Gary S.

APPLICANT: Jing, Shuqian

TITLE OF INVENTION: IL-17 Like Molecules and Uses Thereof

FILE REFERENCE: 01017/31128B

CURRENT APPLICATION UNMER: US/09/886,404

CURRENT FILING DATE: 2001-06-21

PRIOR APPLICATION NUMBER: 09/810,384

PRIOR FILING DATE: 2001-06-21

PRIOR APPLICATION NUMBER: 60/266,159

PRIOR PAPLICATION NUMBER: 60/266,159

PRIOR PAPLICATION NUMBER: 60/213,125

PRIOR APPLICATION NUMBER: 60/213,125
